WORK EXPERIENCE

Zen Computer Systems Sdn Bhd

Solution Developer, Mobile
Cyberjaya, Selangor, Malaysia | April 2025 – Present

JAKIM Touch — JAKIM

- Rebuilt the official JAKIM Touch app from the ground up using Flutter, Dart, and GetX, shipping across iOS, Google Android, and Huawei (HMS) ecosystems for a national government client.
- Built a runtime device abstraction layer detecting Google Mobile Services vs. Huawei Mobile Services, resolving location and map crashes on non-GMS Huawei devices.
- Developed native home screen widgets — SwiftUI/WidgetKit on iOS and Kotlin/RemoteViews on Android — displaying live prayer schedules synced from the Flutter app.
- Built a headless background sync engine using Android WorkManager to silently refresh location, resolve prayer zones, update widgets, and reschedule daily prayer notifications.
- Integrated a Microsoft Copilot Studio AI chatbot into the app, including secure URL routing and whitelisting for chatbot responses.
- Hardened the app with runtime security protections (freeRASP), including root/jailbreak detection and anti-tampering checks, to meet government VAPT requirements.
- Built a Qibla compass using great-circle bearing calculations and a low-pass filter on magnetometer data for stable readings.

i-Kredikom 2.0 — KPKT

- Rebuilt the i-Kredikom app from the ground up using Flutter and Riverpod for the Ministry of Housing and Local Government (KPKT).
- Integrated MyDigital ID 2.0 national digital identity login using OpenID Connect (OIDC) with PKCE for secure authentication.
- Built a GIS-based locator using OpenStreetMap and marker clustering to display licensed moneylenders and pawnbrokers nationwide.
- Implemented statutory financial calculators for interest rate and fee caps under the Moneylenders Act 1951 and Pawnbrokers Act 1972.
- Built a two-tier (memory + disk) caching layer to reduce redundant network calls and support offline data access.
- Delivered a 4-language localization system (Malay, English, Chinese, Tamil) with instant in-app language switching.
- Integrated Firebase Cloud Messaging for push notifications, including background deep-link routing to relevant app screens.

MyTax — LHDN

- Built a Stamp Authenticity Check feature for the MyTax flagship application, including on-device QR code scanning and camera permission handling.
- Connected UI verification screens to backend REST APIs with custom retry logic to improve check reliability.

Elix Solution Sdn Bhd

Mobile Developer Intern
Seri Kembangan, Selangor, Malaysia | September 2024 – February 2025

- Contributed to the Lokel Superapp, integrating multiple regional local-council portals into a single Flutter mobile client.

- Built municipal service integrations including ParkN'Pay, compound/fine payments, quarterly assessment tax payments, and recurring monthly passes.
- Implemented user session persistence with background token refresh, secure local storage, deep linking, and transaction receipt generation.
- Improved app stability on weak network connections by building custom empty states, skeleton loading UI, centralized error handling, and local caching.

SELECTED COMPLETED PROJECTS

FitXP — Gamified Fitness Tracking Application

Personal Project | November 2025 – Present

- **Tech Stack**: Flutter, Dart, BLoC, Hive Local DB, Flame Engine, Custom Painters, Figma
- Built an offline-first fitness tracking app using RPG mechanics, converting calorie and macro logs into levels, quests, and an evolving avatar.
- Implemented BLoC architecture across feature modules for clean state separation and scalability.
- Integrated the Flame game engine with Flutter for sprite animation alongside custom painter graphics for optimized rendering.

Recipease — CNN Integrated Assistant App

Final Year University Project | October 2023 – February 2025

- **Tech Stack**: Flutter, Dart, TensorFlow Lite, Spoonacular API, Figma, Lucidchart
- Built a mobile cooking assistant using an on-device CNN model for ingredient recognition from photos.
- Integrated the Spoonacular API to generate recipe recommendations based on recognized ingredients.

AREAS OF EXPERTISE

- **Mobile Development**: Flutter, Dart, Android Studio, Gradle Engines, Native Kotlin, Native Java
- **Web Development**: Vue.js, Laravel, REST API design
- **State Management**: GetX, Riverpod, BLoC Pattern, Provider-style controller binding
- **Backend & APIs**: RESTful API integration, .NET (basic), Postman, Swagger UI, SQL, SQLite, Hive DB, Firebase Cloud Messaging
- **Security & Identity**: OpenID Connect (OIDC) / PKCE, MyDigital ID 2.0, freeRASP, OWASP Mobile Top 10
- **Machine Learning**: TensorFlow Lite, Convolutional Neural Networks (CNN), OCR, Object Detection
- **Tools**: Git, GitHub (Enterprise), Figma, Miro, Microsoft Copilot Studio, CI/CD basics

EDUCATION

Universiti Teknologi MARA (UiTM)

Bachelor of Computer Science (Honours) in Mobile Computing
Kuala Terengganu, Terengganu, Malaysia | GPA: 3.44 / 4.00 | Graduation Date: February 2025

- Academic Honors & Activities: Recipient of the Academic Dean's List Award

Matriculation College Negeri Sembilan

Science Major Matriculation Program - Module 2 (Computer Science)
Kuala Pilah, Negeri Sembilan, Malaysia | GPA: 3.33 / 4.00 | Timeline: August 2020 – May 2021
